

JOIN THE BIOPAK COMPOST SERVICE

In our ongoing effort to reduce the environmental impact of our products, we are now also offering an organic waste collection service in Australia and New Zealand to organically recycle all your food scraps and compostable packaging towards zero waste.

If you consider yourself a responsible business, this is your chance to make a true difference and dispose of your waste in the most sustainable way available.

Organic Waste

Divert your organic waste from landfill – food scraps along with compostable packaging.

Compost Bin

Separate all your organic waste into a green bin.

Collection

Collected weekly or more frequently under special request.

Compost

Organic waste is processed into compost. This returns nutrients back into the soil and eliminates the methane gas that organics emit when they biodegrade in landfill.

Close the loop

Our compostable packaging is designed to be returned to the soil it came from. Unfortunately, if not recycled correctly, they often end up in landfill. Our compost service will ensure the right disposal, turning them into compost and therefore giving nutrients back to the Earth.

Save money

Organics are often the heaviest component in a general waste bin, remove them and you can save money on landfill levies. Remember, by removing even a visually small amount you could make a considerable saving to your waste collection bill.

Tackle climate change

Conventional plastics and their associated methane emissions (when in landfill) have become a ubiquitous problem world-wide, we simply cannot remain the current status quo. Start composting to address climate change and fight its devastating consequences on the planet.

Lead by example

Join the BioPak Compost Service, a movement to divert more waste from landfill. Use our marketing collateral to promote your compost efforts. Lead by example to inspire other to follow your lead. Together we can make a difference!
